Camellia japonica 'Tomorrow Park Hill'

FROM THE EDITOR

The Annual General Meeting was held on Monday 21st Sept. where the office bearers were duly elected. The monthly Bloom Competition was well attended with ten classes of blooms being shown.

I am waiting eagerly for the Annual Dinner and Presentation Evening, where we can all gather to renew friendships and congratulate the prize winners. See pages six and seven for the complete details including payments.

FROM THE PRESIDENT

As alluded to earlier in this edition our AGM is over and our Committee for 2026-7 has been elected. Refer to AGM Minutes on Pages 8 and 9

Many topics were discussed at the AGM including the current details for Next Year's Show.

As it will be combined with the National Show and Conference there are bigger and better happenings planned over the three days from Saturday to Tuesday of the second weekend in July 2027. Final arrangements need to be made with those putting on displays and presentations as the time approaches. We should have everything confirmed by May and venues and Special Events by March.

MEATWORKS BLOOD & BONE

The Next Generation of Blood and Bone

Introducing the new biologically activated MEATWORKS Blood & Bone with INVIGOR8, a unique formula of microbes selected for their ability to unlock nutrients and make them more immediately available to plants.

INVIGOR8 microbes are bioengineered within granules of Activated Carbon visible throughout the MEATWORKS formula. The result is a fertiliser that not only delivers nutrients but will also unlock further nutrients and improve soil health along the way.

Look out for the new 10kg MEATWORKS Blood & Bone in spring.

neutrog.com.au

GOOD THINGS COME IN SMALL(ER) PACKAGES!

Seamungus is now available in a new 3.5kg paper bag, perfect for all plants, all year round.

Now packaged in a fully compostable paper bag, this new size is easier to manage and store, and more accessible for every gardener.

With its powerful blend of seaweed, fish, humates and manure, Seamungus supports strong root growth, healthier soil and better plant establishment, especially through winter, when gentle feeding and soil enrichment matter most.
